

Lab Exercise 5:Principal Component Analysis

Sumathi L

•

Dec 19, 2025 (Edited Dec 27, 2025)

Each student shall collect data from 5 for any one course. the dataset must include the following four attributes:

-
-
-
-

After forming a dataset with , the student is required to by computing the step by step. Using the computed principal components, the student must .

Students will understand how PCA reduces dimensionality, identifies correlated variables, and determines the minimum number of components required to retain maximum information
